DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-5, 11-24, and 28-35 are drawn to transferring the outputs of antenna assemblies in an alternating fashion, which is classified in class 370, subclass 334.
 - II. Claims 6-9, drawn to multiplying slots and with a signal at a given frequency, and summing the outputs which is classified in class 370, subclass 454.
 - III. Claims 25-27, are drawn to a channel estimator for determining signal quality based on recent history, which is classified in class 455, subclass 509.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because claims 6-9 in Group II. discloses

Art Unit: 2618

the multiplying slots with a signal to provide output A , $B+A$, $A-B$; $A + B$; $A+B \cdot F$ and $A \cdot F + B$. The subcombination has separate utility such as multiplying slots from separate antenna assemblies with a signal.

Inventions I and II. are related as a combination and subcombination as explained above, however Invention III. is distinct from Invention I. and II., which would be classified in class 455 subclass 509, and would require a different search.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

3. The examiner has required restriction between combination and subcombination inventions. Where applicant elects a subcombination, and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.
